

# Switchgear refurbishment

## Why Lucy Electric?

Lucy Electric has been manufacturing electrical switchgear for over 100 years and has a strong commitment to supporting its products throughout their life cycle.

As well as installing, commissioning and maintaining these assets, Lucy Electric provide a comprehensive range of refurbishment and upgrade services to extend asset life.

Lucy Electric primarily offer refurbishment services for its own manufactured plant, but also offer the same service for third-party manufactured assets. The aim of our refurbishment service is to restore assets to their original conditions.

## Refurbishment Services

Lucy Electric's Energy Services team undertake the refurbishment of a wide range of products, including:

- Overhead line products
- Switch disconnectors (DSB's for example)
- Secondary distribution switchgear
- Sabre (legacy and current models)
- FRMU (legacy and current models)

## What does the work involve?

Our Energy Services team will work with you to understand your requirements and recommend a refurbishment plan based upon the condition and age of existing units. Refurbishment can be undertaken onsite, in a substation or at one of Lucy Electric's service workshops and it can be planned around your work programme.

The refurbishment will include all standard maintenance checks, but also enhanced activities such as full painting, replacement covers, gasket and seal replacement, and contact replacement or adjustment.

## Delivery capabilities

Lucy Electric's Energy Services team employ a number of highly skilled engineers with knowledge of Lucy Electric products to undertake refurbishment activities.

Many of these engineers have worked in one of our factories, manufacturing switchgear and undertaking works on site, combining site knowledge with switchgear expertise.

Genuine spares for many of our products are available as part of any specific contract requirements and our team can discuss your requirements to meet your specific needs, depending on asset type.
